

Biochemist, agricultural economist, environmental engineer—a career in this Cluster doesn't necessarily mean down on the farm! There's a lot to putting wholesome food on the table and keeping ecosystems clean—from lab research to managing resources like forests and soil. And it's not limited to the land—aquaculturalists, communications technicians, recycling technicians, and pollution prevention and control managers are all possible occupations. Continued globalization of the food, agricultural, and natural resources will increase opportunities for those who understand the socioeconomic factors that define global markets.

Other Career Possibilities:

Agriculture Teacher, Animal Scientist, Environmental Engineer, Food Scientist, Veterinarian Assistant
