

If you have a burning curiosity about how the world works—or enjoy coming up with bright ideas for making things work better—then chances are you can find a satisfying career in the Science, Technology, Engineering & Mathematics Cluster. While specialties in this cluster range from aerospace engineer to zoologist, all these disciplines require a knack for turning accurate analysis into keen insight. Success in this area results from a strong emphasis on education and training, and job prospects are especially favorable for those interested in the environmental sciences.

Other Career Possibilities:

Biologist, Bio-Technologist, Mathematician,
Chemical Engineer, Oceanographer, Electrical Engineer
